PROJECTS

Weather Application | [JavaScript](#) · [REST API](#) · [OpenWeatherMap](#)

- Developed a real-time weather app using vanilla JavaScript that fetches live data from a public weather REST API.
- Displayed dynamic data including temperature, location, humidity, and weather conditions with a clean, user-friendly interface.
- Handled async API calls using fetch() and implemented error handling for invalid locations or network failures.

Chat Application | [Java](#) · [Sockets](#) · [Client-Server Architecture](#)

- Built a peer-to-peer chat application in Java using TCP socket programming, enabling real-time text messaging between client and server over a local network.
- Implemented multi-threaded server logic to handle simultaneous connections without blocking the main thread.
